

BAR MAGNETS

Bar magnets are used in a wide range of applications. For display, cabinet making, automobiles, mobile phones, digital cameras, jewelry, clothing, all kinds of hardware accessories, electrical and laser heads, toys, gifts, speakers, packaging, leather goods, medical equipment and advertising industries.

All of these magnets are Neodymium in nature and are the most powerful commercially produced magnets.

BUTTON MAGNETS

Button magnets are popular for usage in electronic casings, jewellery boxes, gift boxes, specialty packaging or smart boards. These are convenient in application and available in different sizes.

When handling magnetized neodymium magnets, their exceptional magnetic force may cause them to attract to metal (or to each other) so strongly that fingers in their path could prove painful.
