

COLD LAMINATION & MOUNTING FILM

Our cold laminating films provide the basic protection against moisture fingerprints, dust, abrasion, UV radiation damage, and solvent resistance and are suitable for indoor or short-turn outdoor applications. This would seal the photo base paper, preventing moisture absorption and paper splitting. To avoid the image from curling, it is recommended to use laminates of equal gauge during the process of encapsulation. Over laminating will also decrease the rate at which the images fade.

Available Types and Sizes:

ER02
Cold lamination film
Clear vinyl film with PE paper liner
Face material : 80mic clear vinyl Gloss
Release liner : 80gsm PE paper
Size/roll : 37", 51", 61" x 45mtrs

ER10

Cold lamination film

Foggy vinyl film with PE paper liner

Face material : 70mic foggy vinyl Matt

Release liner : 80gsm PE paper

Size/roll : 37", 51", 61" x 45mtrs

Our clear double-sided adhesive mounting films have a key feature : the central carrier layer of film is adhesive-coated on both sides and the films are also protected with polyester release liners to preserve the adhesive smoothness and optimise clarity. Primarily used for mounting photographic, ink-jet, large transparencies, as such these films have diverse uses.

SH012T

Mounting film

Ultra clear double sided adhesive film

Middle carrier : 23u polyester

Release liner : One side : 36u polyester

Another side : 36u polyester

Size/roll : 41", 51", 60" x 45mtrs
